ACQUISITIONS

INSECT RESISTANCE IN CROP PLANTS by R.H. Painter. New York, Macmillan, 1951.
520 p. 423 Pl6.

"The literature on the resistance of crop plants to insects has been widely scattered even for individual crops. One purpose of this book has been to bring together the references of this nature and to summarize that work in certain crops as an indication of what has and can be accomplished by this means of insect control. The viewpoint of the biological phenomena described in this volume is primarily that of an entomologist. An attempt has been made to give equal emphasis to both entomological and the plant-breeding phases." Preface.

ABSTRACT BIBLIOGRAPHY OF THE CHEMISTRY AND TECHNOLOGY OF TUNG PRODUCTS, 1875-1950, by R.W. Planck and others. New Orleans, Southern Regional Research Laboratory. USDA, BAIC - AIC 317, 1: v. 1952.

A compilation of more than 2800 references and abstracts of articles and patents. A valuable reference to be issued in four volumes.
